Education

Polytechnic of Milan Italy
M.Sc. Computer Science and Engineering *Feb 2024 – Dec 2026*

- Gained hands-on skills on complex systems design and security, operating systems, cloud scalability.
- Articulated solutions for vague and evolving requirements demanding strong abstract thinking.

Polytechnic of Milan Italy
B.Sc. Computer Science and Engineering *Sep 2020 – Feb 2024*

- Completed several projects emphasizing proactive problem solving, and rapid self-learning abilities.
- Built solid fundamentals, including MVC, OOP, multi-threading, relational DBs and data structures.

Thesis

AWS IoT Greengrass real-time configuration switches Polytechnic of Milan, Italy
AWS, Python, Bash, Docker, MQTT *Mar 2026 – Oct 2026*

- Engineered a dynamic multi-layer orchestration system for edge-to-cloud architectures.
- Automated container management and load balancing across distributed computational layers.
- Implemented runtime application scaling and placement strategies leveraging AWS IoT Greengrass.

Projects

ABB-MDU-Polimi Joint Project – *C#, React, ASP.NET, REST, Bash, Batch* 200 hours, Distributed Teamwork

- Collaborated in a 9-person remote team to enhance a ABB Ltd. system.
- Modernized a factory simulator made of 10 Raspberry Pi nodes running Windows/Linux remotely.
- Replaced legacy deployment tools for running remote commands and file transfers in local networks.
- Work divided between Italy and Sweden, using SCRUM and engaged directly with stakeholders.

FlasherPay Startup – *Go, gRPC, GraphQL, PostgreSQL* 250 hours, Fintech Full Stack App

- Helped planning and building a initial 7-microservices system for a group payments platform.
- Managed full software lifecycle from design documents to implementation and automations.
- Devised maintainable client-server, service-service communication and implemented CI.
- Practiced TDD (+90% coverage on 20k lines of code), improving correctness and reliability.

Fractal Image Generator – *C, C++, CUDA, GPU* 50 hours, Parallel Programming

- Coordinated the implementation of a 3-kernel, high-performance, custom image generation pipeline.
- Progressively optimized GPU-accelerated execution, cutting runtime from seconds to 280ms, reducing algorithmic complexity to comply with strict time and memory constraints.

Well MEing App – *Swift, Python, Firebase* 100 hours, AI-based Mobile App

- Directed a team of five in building a iOS app for evaluating people wellness (10k lines of code).
- Used Firebase (GCP) as backend, deploying a NoSQL DB, 2 AI-based modules, and APIs for data upload.
- Stress-tested with 30+ users, and improved code and cloud config to ensure sub-100ms latency.

Mars Terrain Classification – *Python, TensorFlow, Keras, CNN* 150 hours, Deep Learning

- Secured 2nd place (out of 200) in a semantic segmentation, convolutional neural network training challenge for classifying Martian terrain compositions, reaching 74% accuracy.
- Focused on data augmentation ad analysis, increasing dataset size 4x to 10k samples.

Work Experience

Waiter Ispra, Italy
Vespucci Restaurant *Jul 2022 – Sep 2022*

- Provided service in a high-end restaurant requiring close coordination with a large team of 20.

Skills

Programming: Java, Python, C, C++, C#, CUDA, Swift, Go, JavaScript
Tools & Technologies: Git, Docker, SQL, Linux, Bash, AWS, HTML, CSS, Neovim
Languages: English (C1, ETS 930/990), Italian (native)
